

## Lead Frontend Engineer

### Experience

Minimum of 7+ years

### Skills

JavaScript (especially SPAs), HTML5, CSS3, TypeScript, Java, jQuery

### Responsibilities

We believe that Senior Engineers are leaders in their teams and make an impact with everything they do, from technical tasks to teamwork. To succeed in this role, we believe

you should possess:

- Empathy – When reading old code, delivering a feature, or mentoring a junior, you take their perspective into consideration.
- Experience – Ample experience in JavaScript (especially SPAs), HTML5, CSS3 – and a bit of Java, jQuery, or TypeScript wouldn't hurt.
- A desire to make a difference – To improve our tech, team, and processes, a drive for change is part of your DNA.
- Communication – you know how to present your ideas and listen to feedback, whether it's with your whole team, your manager, a mentee, or a peer. Strong English skills go a long way.

We are modernizing our platform from a jQuery-based server-side rendered MPA built on

Java Spring; refactoring it to a client-side rendered SPA built in Angular. As a result, there

are many tools in our box, but the most important are:

- Java 17 with Spring Boot, still some parts in Struts and Spring.
- Gitlab for our repositories and CI/CD Pipelines
- Web Components for the new frontend (Angular in the near future).
- jQuery with Apache Velocity for the old frontend, Thymeleaf and Web components for the new one.
